

Brookstown Rd - Evangeline St Area Rehabilitation Project (Phase 1)

City-Parish #10-AR-BD-0039

Advertisement for Bid: **4th Quarter 2010**
 Project End: **4th Quarter 2012**

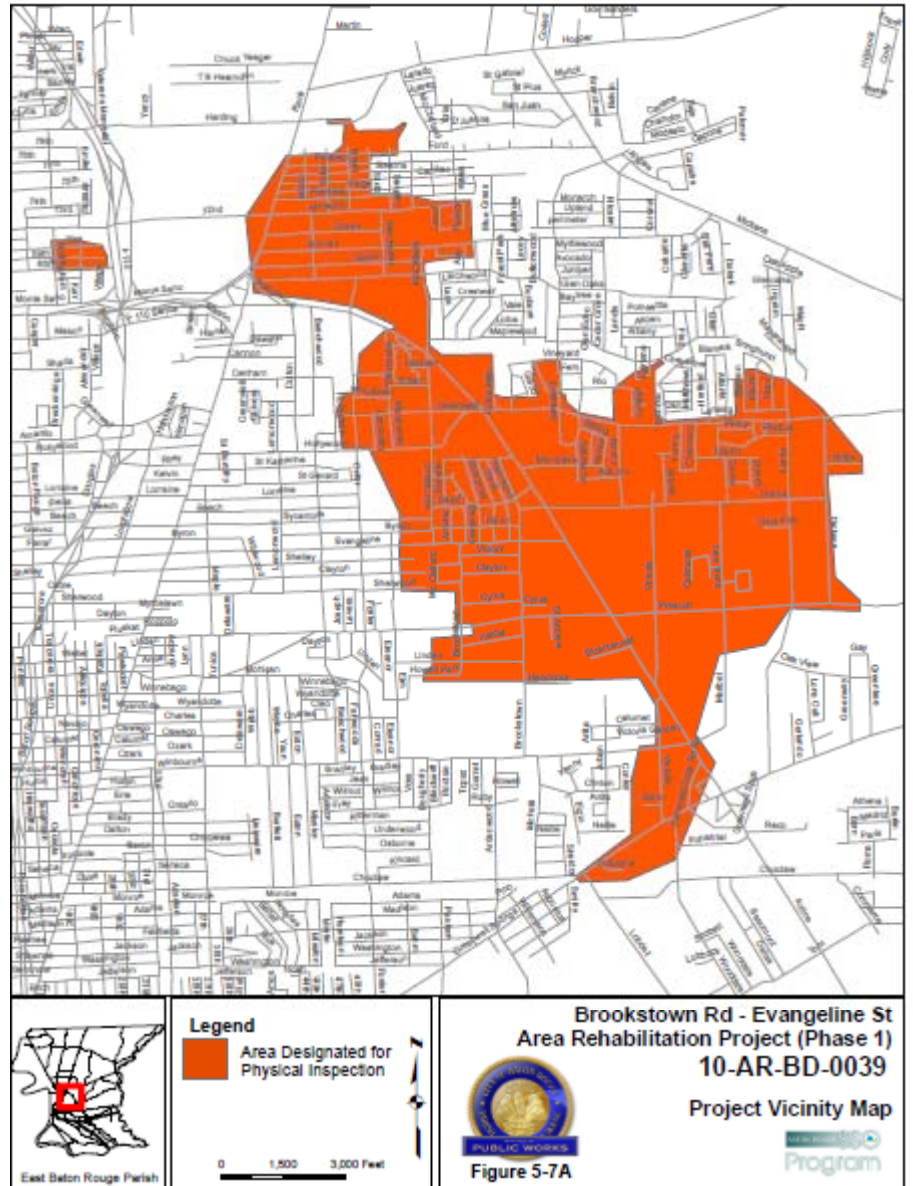

Rehabilitation of the sewer collection system is a comprehensive physical process that begins with cleaning and inspection of sewer pipes and manholes. Typical rehabilitation repairs include pipe and manhole replacement and trenchless technologies that minimize above ground disturbances, such as cured-in-place pipe liners.

One of the first steps in rehabilitation includes a physical inspection of manholes and pipes to identify blockages.

Simply cleaning the pipes and manholes in preparation for the physical inspection removes blockages, debris and roots.

Brookstown Rd - Evangeline St Area Rehabilitation Project (Phase 1) Facts

For this project:

- Approximately 271,678 linear feet of pipeline were inspected and rehabilitated
- Approximately 1,113 manholes were rehabilitated or replaced
