

# Acadian Thwy - Perkins Rd Area Rehabilitation Project

City-Parish # 10-AR-BD-0044

Advertised for Bids: **3<sup>rd</sup> Quarter 2011**  
 Project End: **4<sup>th</sup> Quarter 2012**

Rehabilitation of the sewer collection system is a comprehensive physical process that begins with cleaning and inspection of sewer pipes and manholes. Typical rehabilitation repairs include pipe and manhole replacement and trenchless technologies that minimize above ground disturbances, such as cured-in-place pipe liners.

One of the first steps in rehabilitation includes a physical inspection of manholes and pipes to identify blockages.

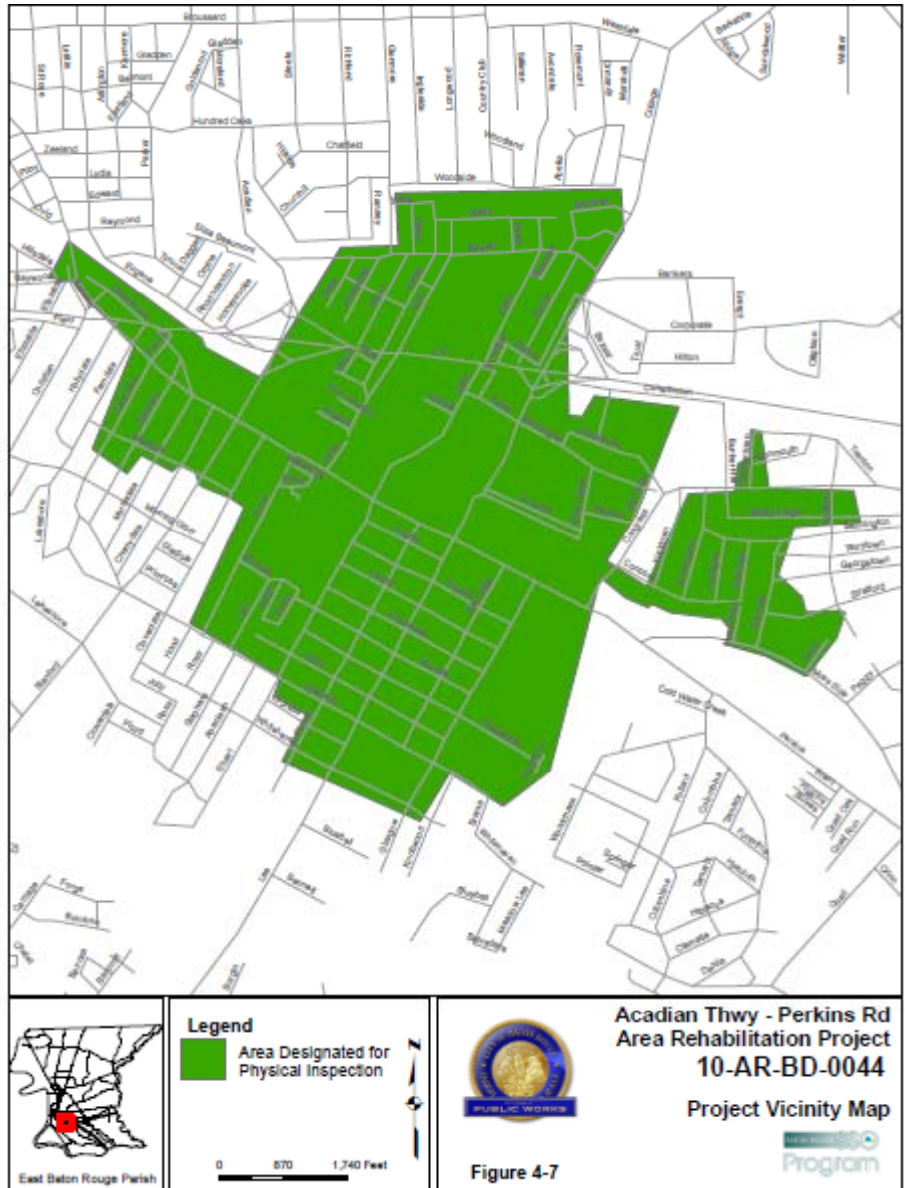

**Before**

Simply cleaning the pipes and manholes in preparation for the physical inspection removes blockages, debris and roots.

**After**

## Acadian Thwy - Perkins Rd Area Rehabilitation Project Facts

The construction of rehabilitation projects will typically include the following components. For this project:

- Approximately 133,004 linear feet of pipeline will be inspected and rehabilitated
- Approximately 517 manholes will be rehabilitation or replaced
